

# POINTS OF VIEW: COLOR BLINDNESS

Marcin Kosiński, Anita Szewczyk

December 2014

# LITTLE INFO

Protanopia and deuteranopia, the two most common forms of inherited color blindness, are red-green color vision defects caused by the absence of red or green retinal photoreceptors, respectively.

In individuals of Northern European ancestry, as many as 8 percent of men and 0.5 % of women experience the common form of red-green color blind-ness.
